TITLE

Research data in mathematics, FAIRness, and the MaRDI consortium

ABSTRACT

In this talk we will introduce a definition of 'research data' in mathematics which encompasses all digital objects you handle in the process of doing research. We will discuss how these data can be treated in a sustainable, so called FAIR way, using a small example from algebraic statistics. Introducing the MaRDI consortium, a nationwide initiative to implement FAIRness in mathematics, we then go on to an interactive part. During this we wish to find out which types of research data are currently present in the Magdeburg audience, how they are being handled, and what MaRDI can do for you.
